

Combined unipolar phase comparator and voltage detector

It can be used for indicating voltage on medium voltage AC equipments for phase comparison. We can choose between the two operating modes. The steps of the detection are accompanied by light and sound signals. The device can be used only with operating rod tested for the related voltage level.

Type	VKP-AF-638
Rated voltage	6-38 kV
Max. voltage	40,5 kV
Threshold voltage	$1,9 \text{ kV} \leq U_k \leq 2,4 \text{ kV}$
Product code	505300
